

The screenshot shows a window titled 'Form1' with a light gray background. At the top, there are standard window controls (minimize, maximize, close). Below the title bar, there are two empty dropdown menus. Underneath them is a text input field containing 'AN1001' and a date input field containing '03.03.2014'. At the bottom of the window is a toolbar with icons for navigation (back, forward, search, etc.) and actions (add, delete, edit, etc.).

(1) Nach dem Start der Anwendung sind die DBLookupComboboxen leer.

(2) Blättert man zum zweiten Datensatz, verhalten sie sich normal:

This screenshot shows the 'Form1' window after navigating to the second record. The first dropdown menu now displays 'Lieferant1' and the second displays 'Kunde2'. The text field still shows 'AN1002' and the date field shows '03.03.2014'. The toolbar at the bottom is visible with the same set of icons.

(3) Blättert man wieder zurück, so erscheinen auch die Daten in den Lookup-Comboboxen, die man eigentlich bei (1) schon erwartet hätte:

This screenshot shows the 'Form1' window after navigating back to the first record. The first dropdown menu displays 'Lieferant1' and the second displays 'Kunde1'. The text field now shows 'AN1001' and the date field still shows '03.03.2014'. The toolbar at the bottom is visible with the same set of icons.

An Stelle von (2) hätte man auch den Refresh-Button verwenden können.

Beide „Workarounds“ sind aber sicher nicht im Sinne datenbanksensitiver Controls.
